Course: Developing mobile web apps.

Android and iPhone app. development

Are you a web developer that wants to be able to create iPhone and Android apps? If you are we have just the course for you.

Peter Svensson and Tom Blackmore have created web apps for a variety of customers, in this course you'll learn from their experiences. You'll build a web app. that runs on both iPhone and Android, you'll learn from the pitfalls that they have faced. The course will give you the core skills you need to build your first cross platform app.

We'll also briefly look at how to turn your web app. into a native app. so you can distribute it through the various app. stores. See schedule for more information about the content.
